

Image Steganography

Steganography is a technique of hiding information in digital media. Steganography is the art of hiding the fact that communication is taking place, by hiding information in other information.

Many different carrier file formats can be used, but digital images are the most popular because of their frequency on the internet. For hiding secret information in images, there exists a large variety of steganography techniques some are more complex than others and all of them have respective strong and weak points.

PROPOSED SYSTEM:

- We propose the information hiding concept to reduce the risk of using cryptographic algorithms alone.
- We are creating a system application using java to achieve Image Steganography.
